

ETS Inc. **SM1-LE2 Microphone Instructions**

The SM1-LE2 is a high quality, 12-24VDC powered, surface mount, omni-directional, pre-amplified microphone for use with DRVs, IP cameras, etc. Note- the audio output of the SM1 is switch selectable “line level” (0db) or “microphone level” (-30db).

SM-LE Microphone Placement.

Locate the SM1-LE2 Microphone near the area of interest in the room to be monitored. If the entire room is to be monitored, locate the SM1-LE2 in the middle of the room. Do not mount the microphone near air conditioning vents, light fixtures or electrical equipment. The SM1-LE2 should be placed as close as possible to the subject(s) to be monitored. The SM1 is still useable at distances of up to 25 feet but is dependent on the level of background noise in the area. Experimentation in the environment will determine what distances work best.

Cable Run

Run a 22 gauge, stranded, two conductor shielded cable between the SM1-LE2 microphone and the monitoring device. Keep the cable run distance under 1,000 feet and away from AC power sources, light fixtures and electrical equipment. Connect power to the + terminal, the audio signal to the “audio” terminal and ground to the – terminal. *See Figure 1 for connection diagram.*

Mounting

The SM1-LE2 is designed to be mounted on any flat surface. The cable can be routed into the SM1-LE2 from the side or from the rear of the enclosure.

Adjusting the SM-LE Gain (open the enclosure to adjust)

The SM1-LE2 output level is set by selecting the desired volume range and adjusting the gain control.

The “Volume Range” switch should be set to the “LO” position when using the SM1-LE2 with IP cameras that utilize “microphone inputs” also known as “Mic. Level” inputs. This sets the maximum gain of the SM1-LE2’s pre-amp to x14. The switch should be placed in the “HI” position when using IP cameras with “Line level” inputs of DVRs and IP cameras. This sets the maximum gain of the SM1-LE2’s pre-amp to x196.

The SM1-LE2 is shipped with the gain set at midrange. If the sound at the “head end” is distorted, rotate the control towards the – mark (counter-clockwise). If the volume at the “head end” is too low, rotate the control towards the + mark (clockwise).

Setting the SM1-LE2 Hi-Cut/Lo-Cut Switches

The normal frequency response of the SM1-LE2 microphone is 500-16Khz. When both switched “in”, The “HI Cut” and “Lo Cut” filters set the SM1-LE2’s frequency response to 900-6Khz . Enabling one or both of the filters is useful when background noise needs to be further reduced and intelligibility of speech emphasized. We recommend experimenting with the switch settings to achieve the best acoustic result for your application.

Caution

It may be against the law to install this microphone kit in certain environments. It may also be against the law to record conversations of the person(s) being monitored without their knowledge. It is the responsibility of the installation company and end-user to determine if the application of this product is legal. These laws vary from state to state. If you are not informed on these matters, consult a qualified attorney or contact the appropriate state agency. A sticker is provided with this kit for the applications where notification must be posted.

Warranty

All ETS products carry a one year parts and labor warranty. This warranty does not cover damages as a result of misuse, improper handling of the unit or exposure to extreme temperatures or moisture. At its discretion, ETS reserves the right to repair or replace this unit under the conditions of the warranty. If you experience problems with your equipment call ETS at: 505-888-3923 to obtain a return authorization number. Equipment requiring repair beyond the warranty period or units that have been damaged or are not covered under the warranty can be repaired by ETS for a minimal cost under most conditions.
